unisys

Align your applications with business needs

Unisys Application Maintenance

Highlights

Application management that ensures applications meet industry standards with seamless operation, superior performance and ongoing improvement

Continuous feedback loops among application portfolio management, application lifecycle management, IT services management and advanced monitoring solutions

Support for a wide range of applications, including custom, cloud-native and packaged applications such as SAP, Oracle and Salesforce

Security practices integrated within the DevSecOps process

Global network of delivery centers offering extensive support and services

Seamless, uninterrupted operations and high performance throughout an application's lifecycle are essential to enhancing user experience, ensuring data security and maintaining a competitive edge. However, many organizations find it challenging to perform constant monitoring and updates and lack employees who can provide efficient 24/7 services to meet all business needs.

Unisys Application Maintenance provides industry-compliant services to ensure seamless operation, superior performance and continuous improvement throughout an application's lifecycle. By facilitating feedback loops among application portfolio management (APM), application lifecycle management (ALM), IT service management (ITSM) and next-generation monitoring, Unisys enables innovation and empowers your organization for success.

Manage business applications effectively

Operate applications efficiently to consistently meet performance, security, compliance and functionality requirements and align with business objectives.

With expertise in DevSecOps and cloud security architectures, Unisys increases application security, reduces risk and helps ensure regulatory requirement compliance.

With Unisys, you can achieve streamlined and consistent ALM, provide faster resolutions, and reduce subject-matter expert dependency using AI accelerators. Improve operational efficiency, reduce resource expenditure and gain a heightened capacity for innovation within your organization.

How you benefit

Application availability and performance: Ensure that applications operate smoothly and deliver value over time, freeing your organization to focus on its core business. Application management services from Unisys provide uninterrupted functionality, top-tier performance and ongoing enhancement over an application's entire lifespan.

Improved efficiency and experience: Elevate user experience by streamlining operations, reducing redundancies, optimizing processes and swiftly resolving issues using AI accelerators, all while achieving better resource allocation.

Industry compliance: Mitigate risks and reduce vulnerability to security breaches and data leaks with applications that have security integrated throughout their development. Automated security checks speed time-to-market and ensure compliance with industry standards and regulations, including the Health Insurance Portability and Accountability Act (HIPPA), Federal Information Security Modernization Act (FISMA) and Payment Card Industry Data Security Standard (PCI DSS).

Continuous improvement: Improve operations within your organization continuously via the innovative feedback loops between APM, ALM, ITSM and next-generation monitoring.

Why Unisys?

Unisys provides a comprehensive solution designed to meet all of your organization's application management needs. Utilizing AI-powered technologies, Unisys delivers an unparalleled customer experience. This advanced approach provides exceptional value at competitive, fully transparent pricing tiers. As a trusted service provider, Unisys streamlines your onboarding and scaling processes by leveraging partnerships with leading cloud providers such as Azure, AWS, Dell, and Google.
